

SRUSHTI AJAY PATIL

513-580-9053 · srushti.patil5022@gmail.com · LinkedIn

Professional Summary

Technical Project Management professional with 6+ years of experience leading cross-functional software and infrastructure initiatives across engineering, product, operations, and analytics teams. Proven ability to drive end-to-end delivery through scope definition, milestone planning, dependency management, risk mitigation, and release readiness across AWS-based distributed systems. Experienced in Agile and hybrid delivery models, Scrum facilitation, stakeholder communication, KPI tracking, and technical launch governance, with a strong engineering foundation in AWS, microservices, CI/CD, APIs, databases, and reliability engineering. Proven track record of improving delivery outcomes, operational readiness, system reliability, and cost efficiency across large-scale global environments. Preparing for PMP (October 2026)

Core Competencies

Smartsheet · Jira · Asana · Microsoft Project · Microsoft Office (Word, Excel, PowerPoint) · AWS · Program Execution & Delivery · Project Planning, Scope, Schedule & Release Management · Program Governance · Cross-Functional Leadership · Requirements & Dependency Management · Risk Identification & Mitigation · C/C++ · Agile & Hybrid Delivery · Scrum Facilitation · Change Management (ITIL) · Technical Launch Governance · KPI/SLA Tracking · Incoming Request Validation · Project Documentation (Release Notes, Lessons Learned) · Stakeholder Communication

Work Experience

Amazon

Bellevue, WA

Software Development Engineer—Technical Project & Program Delivery

Feb 2022 – April 2026

AWS Services, Java, Python, SQL, Distributed Systems, CI/CD, Jira, Asana, M365, GitHub

- Owned project execution and launch readiness for Dynamic Turn Costs v4, tracking milestones, cross-team dependencies, risks, and release commitments to deliver a zero-regression production
- Improved change-management readiness by designing a fillable MCM template that reduced preparation time to minutes, standardized required information, and supported test planning, validation, and pre-launch readiness reviews to ensure smooth deployment
- Drove cross-functional planning and execution for Speed Inference modernization, coordinating scope, milestones, dependencies, risks, and stakeholder alignment across engineering and analytics teams; delivered 52% faster processing and 30% higher cluster utilization
- Served as Scrum Master, leading sprint planning, backlog refinement, daily standups, sprint reviews, and retrospectives while tracking sprint commitments, dependencies, and delivery risks to improve execution predictability
- Led the redesign of Tier-1 startup workflows to reduce service dependencies, improve reliability, and strengthen operational monitoring through automated configuration management and CloudWatch alerting
- Executed the global deprecation of the STC routing model, reducing technical debt and delivering \$160K in annual savings
- Orchestrated end-to-end project lifecycle work, integrating initiation, execution, closure, budget tracking, and retrospective documentation to ensure alignment with organizational goals
- Automated Last Mile simulation environments, improving consistency and cutting \$27K in monthly cost
- Mentored a junior engineer and intern, guiding scope, priorities, and delivery of independent projects within 90 days

University of Cincinnati

Cincinnati, OH

Student Software Developer

Feb 2021 – Feb 2022

React.js, HTML/CSS, UI Architecture, Workflow Design, GitLab

- Built a React-based decision-support app for 7,500+ medical staff, translating clinical guidelines into workflows and creating a reusable UI architecture for consistent, maintainable UX
- Partnered with clinical stakeholders to validate workflows, author documentation, and support universal rollout

Tata Consultancy Services— Client:Daimler Truck North America

India

System Engineer

Sep 2018 – Jan 2021

Java, Spring Boot, REST APIs, Distributed Systems, SQL, DevOps

- Delivered a scalable warranty-processing platform for automotive OEM client Daimler Truck North America, integrating 15,000+ business rules to improve throughput and reduce latency across enterprise workflows
- Modernized a monolithic system using Spring Boot and REST APIs, optimizing middleware and 25,000+ business rules to deliver 40% faster response times for the client's warranty operations
- Enhanced release stability by 60% in a regulated automotive OEM environment through structured scope management, security scanning, code-quality controls, and crisis-response coordination

Education

University of Cincinnati — M.S, Computer Science

2021–2022

Savitribai Phule Pune University — B.S, Information Technology

2014–2018
